

I have used the following query to create the **avro\_table** to import the **avro** record into the table. Location to get the output “/user/cloudera/avro\_hive” folder.

```
Hive> CREATE EXTERNAL TABLE avro_records ROW FORMAT SERDE
'org.apache.hadoop.hive.serde2.avro.AvroSerDe' TBLPROPERTIES
('avro.schema.url='hdfs://localdomain/user/cloudera/records.avsc') STORED AS INPUTFORMAT
'org.apache.hadoop.hive ql.io.avro.AvroContainerInputFormat' OUTPUTFORMAT
'org.apache.hadoop.hive ql.io.avro.AvroContainerOutputFormat' LOCATION
'/user/cloudera/avro_hive';
```
